# A checklist of agarics (gilled mushrooms) of Kerala State, India

---

**Adnaan Farook V, Shabeer Khan S and Manimohan P\***

Department of Botany, University of Calicut, Kerala, 673 635, India

Farook VA, Khan SS, Manimohan P 2013 – A checklist of agarics (gilled mushrooms) of Kerala State, India. *Mycosphere* 4(1), 97–131, Doi 10.5943 /mycosphere/4/1/6

A literature-based checklist of agarics (gilled mushrooms) occurring in Kerala State, India is provided. It consists of 616 species of gilled mushrooms belonging in 112 genera and 5 orders (Agaricales, Boletales, Gomphales, Polyporales, Russulales) of the Class Agaricomycetes, Phylum Basidiomycota. The relevant original information is contained in about 122 papers, many with only limited distribution and availability. Most of these papers have been published during the last two decades. The geographical distribution of the reports covers all 14 districts of the State. At the order level, Agaricales has the highest number of species (579), followed by Russulales (21). The six most represented genera are *Hygrocybe*, *Entoloma* (41 spp. each), *Lepiota* (39 spp.), *Marasmius* (27 spp.), *Leucocoprinus* and *Pluteus* (22 spp. each). Several of the species are known only from the region and there is a possibility that many are endemic to the region as the level of endemism in the flora and fauna of Kerala is very high. This list covers only a part of the actual diversity of gilled mushrooms in Kerala as studies on the agarics of this region have been uneven, inadequate and therefore inconclusive.

**Key words** – Agaricomycetes – Basidiomycota – biodiversity – species

## Introduction

Kerala State is a narrow strip of land on the south-west corner of the Indian Peninsula. It lies between north latitudes 8°18' and 12°48' and east longitudes 74°52' and 72°22' and is wedged between the Arabian Sea of the Indian Ocean and a mountain range called the Western Ghats. Most of the forested areas of the State are parts of the Western Ghats, which is one of the biodiversity hotspots of the world that has been very recently added to the World Heritage list. The State's total area is 38, 863 sq km, which is only about 1.8% of the total geographical area of India. Yet, almost a quarter of India's plant species are found in Kerala. Among the 4,667 vascular plant species of the State (Sasidharan 2004), 344 are

endemic (Reddy et al. 2007). The very high biological diversity of Kerala is primarily due to the highly diversified ecological niches that occur from sea level up to more than 2,600 meters above sea level encompassing evergreen forests (wet evergreen and semi-evergreen climax forests, west coast tropical evergreen forests, southern hill top tropical evergreen forests and semi-evergreen forests), deciduous forests (secondary dry deciduous forests, southern dry deciduous forests, secondary moist deciduous forests and dry deciduous forests), shola forests, grasslands, mangroves, and the subtypes such as dry teak forests, lateritic semi-evergreen forests, littoral forests, myristica swamps, Nilgiri subtropical hill forests, south Indian subtropical hill

**Fig. 1** – Map of Kerala State, India.

savannah, southern moist mixed deciduous forests, southern secondary moist mixed deciduous forests, and very moist teak forests. The climate of Kerala is tropical, maritime and monsoonal.

It is obvious from the above account that Kerala must be harbouring a luxuriant mycota. However, to this day, the region has not been explored for many groups of fungi. Diversity of only very few groups of fungi such as soil microfungi, foliicolous microfungi, polypores, marine fungi, and lichens have been studied at least at a preliminary level. There are several reasons for this scenario, the scarcity of trained mycologists in the State being a major one. One group of fungi that has been rather intensively explored in the past three decades in this region by several workers is the agarics or gilled mushrooms. In order to consolidate the information so far made available on the diversity of agarics of this region and to contribute to the knowledge of mycota of Kerala, here we provide a literature-based checklist of agarics occurring in Kerala State. Gilled mushrooms are a morphologically discernable and not a taxonomically coherent group and hence they belong to several orders such as Agaricales, Boletales, Gomphales, Polyporales and Russulales of the Class Agaricomycetes of the Phylum Basidiomycota.

## Methods

This checklist contains information gathered solely from published sources up to 31 December 2011. We have excluded all material presented only in Masters, MPhil and PhD dissertations and not subsequently published. Also, we have not listed species identified in the original sources only to genus level (e.g. *Cortinarius* sp.). No herbaria data are given in this checklist as that information is available in the references indicated. However, it must be noted that several mycological herbaria in Europe (e.g. Royal Botanic Gardens, Kew–K, Nationaal Herbarium Nederland, Leiden–L) and North America (e.g. Field Museum of Natural History, Chicago–F, New York Botanical Garden–NY) contain a significant number of agaric collections from Kerala. The systematic arrangement and the nomenclature used are those of Index

Fungorum ([www.indexfungorum.org](http://www.indexfungorum.org)) as accessed on 25<sup>th</sup> November 2012. In this checklist, the names of some species as reported in the cited publications have been replaced by currently accepted name according to the Species Fungorum website ([www.speciesfungorum.org](http://www.speciesfungorum.org)) and this has been indicated in such cases. Invalidly proposed new species from the region are excluded from this list. The checklist is organized alphabetically by order, family, genus and species.

## Results and Discussions

Table 1 lists 616 species of gilled mushrooms belonging in 112 genera and 5 orders (Agaricales, Boletales, Gomphales, Polyporales and Russulales) of the Class Agaricomycetes of the Phylum Basidiomycota reported as occurring in Kerala State on the basis of published information. The relevant original information is contained in about 122 papers, many with only limited distribution and availability. Most of these papers have been published during the last two decades. The geographical distribution of the reports covers all the 14 districts of the State (see Fig 1.) At the order level, Agaricales has the highest number of species (579), followed by Russulales (21). The six most represented genera are *Hygrocybe*, *Entoloma* (41 spp. each), *Lepiota* (39 spp.), *Marasmius* (27 spp.), *Leucocoprinus* and *Pluteus* (22 spp. each). Several of the listed species (138) were described as new to science and so far many of them are known only from Kerala. There is a possibility that many are endemic to the region as the level of endemism in the flora and fauna of Kerala is very high.

Although the list displayed in Table 1 might appear extensive, it covers only a part of the actual diversity of gilled mushrooms in Kerala. For example, although only six species of the genus *Mycena* are listed in this checklist, a work in progress in our lab has unravelled about 50 species of that genus, most of which are new to science and remain to be published. The five most speciose genera listed earlier happened to be so because they benefitted from focussed and exclusive treatments. Most surveys have been conducted in a few, accessible areas of the State and several of the dense forests of the State have not been adequately explored for agarics. In short, the studies on the agarics of this region have been uneven, inadequate and therefore inconclusive.

† Names not found in Index Fungorum.

<sup>^</sup> Taxa described as new to science from Kerala

## Acknowledgements

We are greatly indebted to Dr T.K. Arun Kumar for critically examining the manuscript and verifying the accuracy of several entries in this checklist. We are also thankful to Dr K.B. Vrinda and Dr C.K. Pradeep for bringing to our attention a few omissions in an earlier version of this manuscript. VA Farook acknowledges support from the Kerala State Council for Science, Technology and Environment in the form of a Research Fellowship. SS Khan acknowledges support in the form of a Maulana Azad National Fellowship by the Ministry of Minority Affairs, Government of India.
